

AlfaCare

Ambulance Arrives, Save Lives.

What is AlfaCare?

AlfaCare is an initiative to provide high-quality treatment to all patients, connecting all hospitals and medical bodies at one platform and synchronising their data, so that any doctor can get the patient's medical history and diagnosis test's data and the patients don't have to pay for tests again and again.

Problems

We all are living in a society where groceries, coke, snacks, etc can be delivered within 8 minutes but for ambulances and other health services it is still a nightmare as it takes 30 mins to 2 hours to reach the needy and many times the ambulances aren't available.

1

Getting an ambulance on time is not the big issue, but the main issue is that the victim is ignored by the busy crowd.

2

Even after paying the heavy private hospital bills, the patients don't get satisfactory treatment and other services.

3

If any patient change their doctor, then the other doctor asked them to have all the tests again as their commission is set with laboratories.

4

5

Even government ambulances are bounded to a few specific hospitals as the drivers get commission directly from the hospital when they admit patients to the hospital.

Solution

Ambulance

We will provide fast and free Ambulance service.

Treatment

All patients will get high quality treatment under our guideline.

SaaS-based management

We'll set up a SaaS based management system on every hospital, so that hospitals can request the patient's data from another hospital for a quick treatment.

Awareness

Our team will work on spreading social awareness

Unique Medical Identity

This will make a record of medical history of patients to avoid repetitive tests.

Monitoring

We'll make sure that the patient got admitted to the nearby hospital.

Data Policy

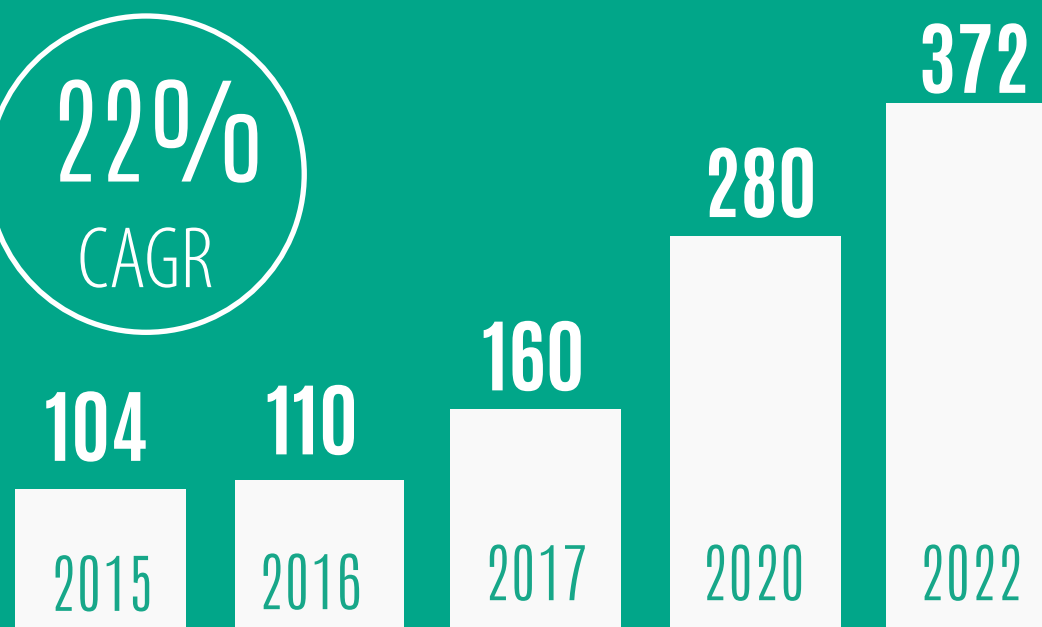

All hospitals should have a synced + segregated patients data

Model

Competition

1

We are the first who is providing all these kinds of services under one umbrella

2

We'll get the first mover advantage

3

Our idea and model is unique

4

Our platform will be super easy to use.

Progress

1

Connecting Hospitals

In talking with 20+ hospitals in NCR

2

Connecting Ambulances

In talking with ambulance service providers

3

Self Consolidation

Building a dedicated core team.

4

Financial Management

Arranging funds

5

Getting Platform Ready

Mobile Applications and other related software are in the development phase
